MANAGED DETECTION & RESPONSE

NETWORKING4ALL

SERVICE

The burglar alarm for your IT environment

Protecting your office building is a matter of installing a smart security system that warns you whenever someone is snooping around after office hours. Why would the same principle not apply to your IT environment? The Managed Protection & Response service by Networking4all does precisely that.

With Managed Detection & Response, Networking4all will become your emergency center. Thanks to specialised security software, we are able to keep an eye on your environment, receive warnings whenever the alarm is triggered, isolate the hacker, and make sure no further damage can be done. And all that, without you having to even lift a finger.

Managed Detection & Response works with smart agents that will be installed on all your work stations and servers. These agents are in contact with our own Security Operations Center and can analyse behaviour and send warnings when software is not behaving according to expectations. Our security experts receive these warnings and can act quickly and securely to protect your company network from infections and attacks.

The advantages of managed services

- ✓ A carefree approach to cybersecurity
- ✓ Managed by our own security experts
- ✓ Networking4all In-house expertise
- ✓ No expensive investments required
- ✓ Fast and secure set-up
- ✓ Powered by F-Secure

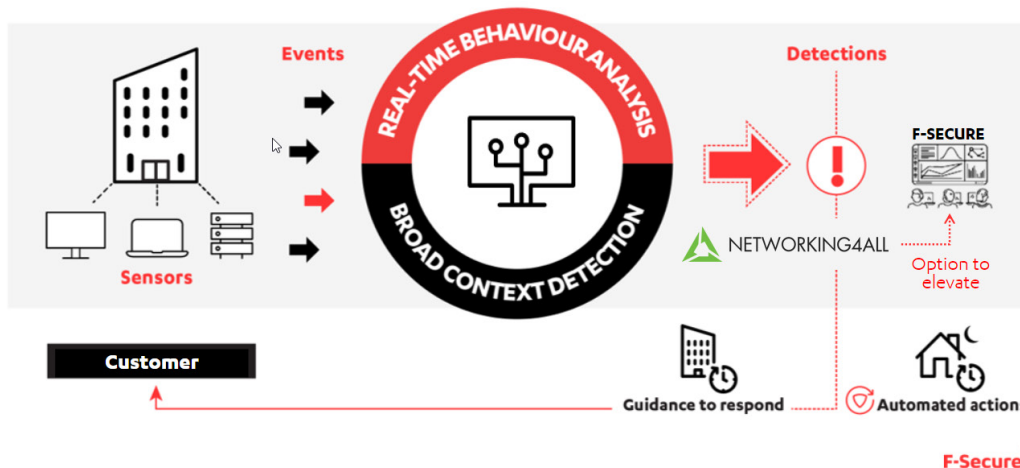

Managed Detection & Response in action

Most of the workings of the Networking4all security team will go completely unnoticed by you. When you use our Managed Detection & Response service, you install the F-Secure agents on your work stations or servers, or let our experts install them for you. From that moment, all events caught by the agents will be securely transmitted to the Security Operations Center.

The number of events that is transmitted by the agents can, depending on the amount of work spaces and servers being monitored, range into the millions a day. That is why our security experts use the F-Secure Rapid Detection & Response platform. F-Secure RDR filters the events based on Broad Context Detection and Real-Time Behaviour Analysis so that day-to-day actions from your employees, normal software processes, and expected reactions are not flagged as a threat.

When an event does turn out to be a threat, our security experts jump into action. They will contact you about the event, can inform you on the infected work station or server, and give advice on steps you can take immediately to neutralise the attack. The agents also allow them to isolate any work station or server that was exposed. This process keeps you up to date quickly and efficiently, letting you take further steps without risking any further infection on your network.

F-SECURE RAPID DETECTION & RESPONSE

Under the hood: F-Secure RDR

F-Secure RDR platform

Networking4all Managed Detection & Response uses F-Secure RDR at the core of our service. This intelligent platform was designed in such a way that it makes breach detection as fast and detailed as possible. The comprehensive dashboard and clearly labelled warnings allow our security experts to react quickly and adequately to events, keeping your company network safe and secure.

Broad Context Detection

Analysing every possible incident would be a time-consuming task without the application of Broad Context Detection. F-Secure RDR works with real-time behaviour analysis, reputation analysis, big data analysis and machine learning to look at events within the context of the company network, making incidents that fall outside the scope of your normal day-to-day easier to spot.

F-Secure

Networking4all and F-Secure have partnered up for the Dutch market to bring IT security and cybersecurity to a higher level. F-Secure has been active in the IT market for over 20 years as an innovator and expert in cybersecurity, detection, response and prevention.

Managed Detection & Response prices

Managed Detection & Response uses a monthly subscription model starting from 10 work spaces. Our subscriptions are fully scalable to suit your needs and all include the Networking4all Service pack.

Managed Detection & Response for Servers

10 to 24 servers (including Networking4all Service contract)	€31,90
25 to 99 servers (including Networking4all Service contract)	€21,90
100 to 499 servers (including Networking4all Service contract)	€17,92
500 to 999 servers (including Networking4all Service contract)	€14,74

Prices per month and per server

Managed Detection & Response for Work spaces

10 to 24 work spaces (including Networking4all Service contract)	€9,98
25 to 99 work spaces (including Networking4all Service contract)	€5,99
100 to 499 work spaces (including Networking4all Service contract)	€5,19
500 to 999 work spaces (including Networking4all Service contract)	€4,55

Prices per month and per work space

Combine your Managed Detection & Response with our Endpoint Security for an even broader coverage of your IT security. Contact our security experts about the options and attractive prices.
